

Project Information Sheet

FRANK ROAD BRIDGE 7.31 OVER EARLY RUN

Project Description

This project will replace the Frank Road Bridge over Early Run with a new precast concrete arch structure, add a shared-use path on the south side and rebuild the sidewalk on the north side.

Project Purpose

- Replacement of the aging bridge structure to maintain safety. The existing structure is rated 4 – Poor Condition.
- Provide additional pedestrian infrastructure.

Potential Impacts

Environmental

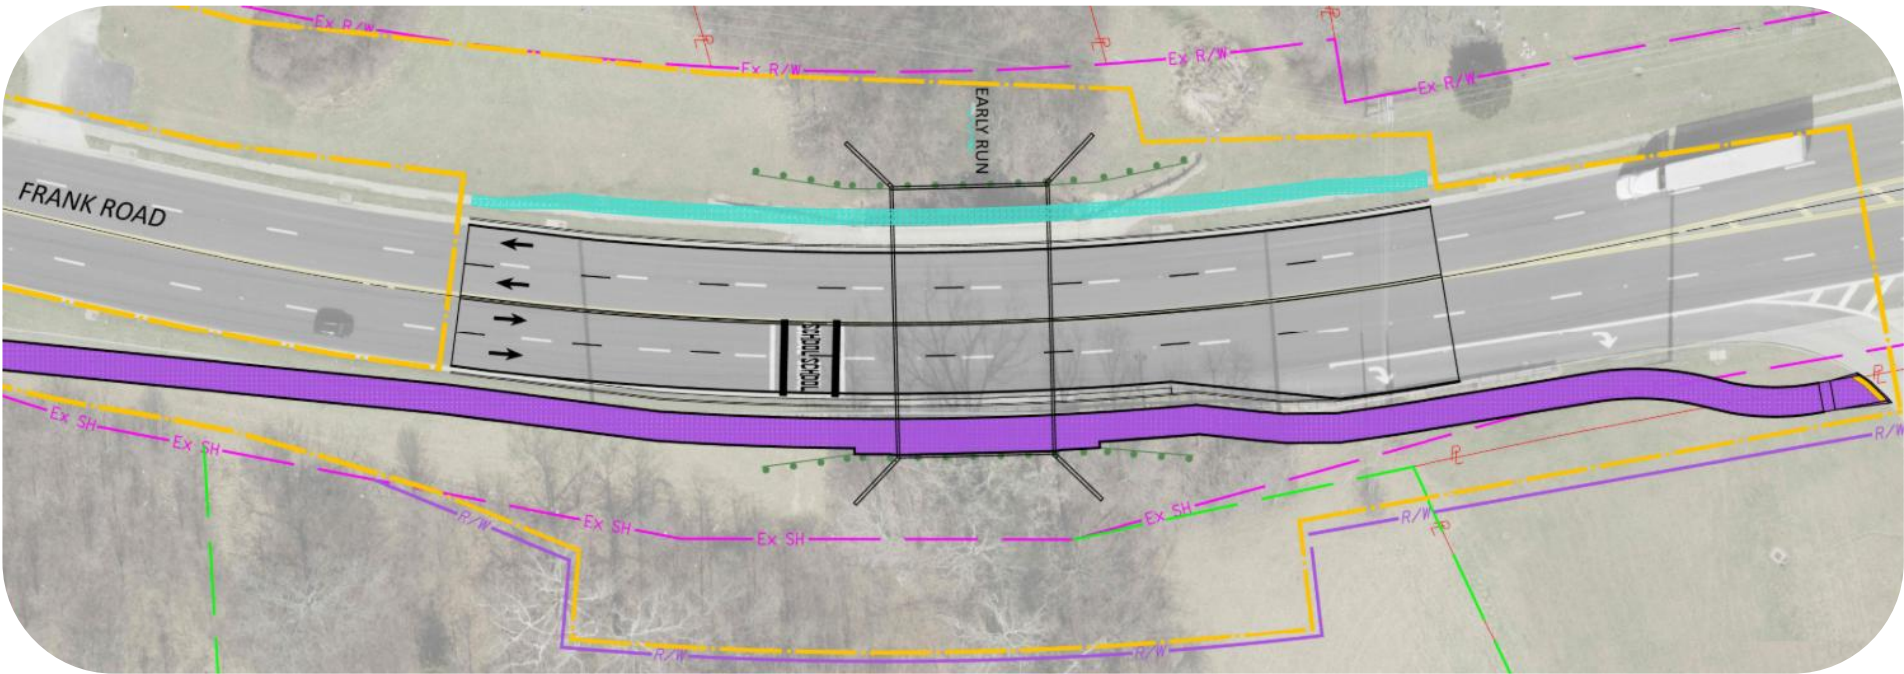

- Project limits include an environmental conservation easement on the south side of the bridge.
- Some trees will need to be removed.

Utilities

- Aerial and underground utility relocations are needed.

Right-Of-Way

- Temporary and permanent right-of-way are needed.
- A real estate representative will contact you directly as design proceeds to discuss the right-of-way needs, acquisition process, and your rights under that process.

Existing Bridge

- Built in 1973
- Condition Rating: 4 – Poor Condition (scale: 9 = best, 0 = worst)
- Four lanes of traffic, sidewalks on both sides

Proposed Bridge

- Four lanes of traffic, sidewalk on the north side and shared-use path on the south side

Maintenance of Traffic

- Frank Road will remain open to traffic during construction, with one lane open in each direction
